WATER QUALITY STATEMENT:
The fact that a water supply is potable is no guarantee that it is suitable for steam generation. Your water supply must be within these general guidelines:

**SUPPLY PRESSURE**
20 - 60 psig

**HARDNESS**
less than 3 grains

**SILICA**
less than 3 grains

**TOTAL CHLORIDE**
less than 4.0 ppm

**pH RANGE**
7-8

**UN-DISSOLVED SOLIDS**
less than 5 microns

* 17.1 ppm = 1 grain of hardness

Other factors affecting steam generation are iron content, amount of chloridation and dissolved gases. Water supplies vary from state to state and from locations within a state. Therefore it is necessary that the local water treatment specialist be consulted before the installation of any steam generating equipment.

SERVICE CONNECTIONS:

- **Electrical Connection to Electrical Box:** 1½" (29mm) conduit.
- **Vent**
- **Drain:** 1½" NPT nipple.

NOTE:
- Dimensions which locate the above connections have a tolerance of + or -3" (+ or -75 mm).
- Installation of backflow preventers, vacuum breakers and other specific code requirements is the responsibility of the owner and installer. It is the responsibility of the owner and installer to comply with local codes.
- Plastic drains are not recommended due to inherent limited temperatures of the plastic. Boiler purge temperatures may exceed 180°F. The installer may be required to provide means to reduce boiler purge water temperature to be that of the condensate temperature of 140°F or less.
- This appliance is manufactured for commercial installation only and is not intended for home use.
